President Daly Returns From the East to Get Things Moving.

ORE SHIPMENTS INCREASING

FRANK KLEPETKO WITHDRAWS FROM CERRO DE PASCO.

President John J. Daly of the Daly-Judge Mining company returned from a brief eastern trip Saturday night, and, while he declined yesterday to go into details concerning the objects of his trip, he admitted that it was for the purpose of meeting some of the heavier shareholders in the company and talking over plans for the future

Mr. Daly said there was no question but what the company's mines would be explored on lines originally planned, but he felt that the shareholders of the company, rather than the public, should be the first to know what the details of the plan were. Some of them already know and all of them

them already know and all of them will be advised soon.

The company's mill is still being operated, and Mr. Daly says advices from camp indicate that it is being made to do better work all the time by Superintendent Shearman. Whether the plant will be kept in full commission or not is therefore a matter yet to be determined. Good reports also come from the mine, and, now that Mr. Daly is in harness with his coat off, there is no question but what there is going to be "something doing" at the "something doing" at the

Daly-Judge from now on.

Like all big mining enterprises mistakes and miscalculations have been takes and miscalculations have been made by the Daly-Judge company, but the mine is better today than it has ever been. The mill is reported to be earning good money, and if the loss in the tailings can be corrected to the extent the management desires there is little doubt that it will be kept in commission. Every feature of the business is receiving the closest attention, and no step will be taken that is not calculated to serve the very best interests of the shareholders. Of the future of the enterprise Mr. Daly is just as sanguine as he ever was, and that substantial results will follow the carrying out of his ideas is already believed by those who have been made lieved by those who have been made. lieved by those who have been made conversant with them and those who do not understand them will, as soon as possible, be enlightened on the sub-

#### PARK CITY SHIPMENTS.

New Names In Producing List With More to Come.

joins the list; the Barnes Brothers guine temperament will probably soon appear with a shipment of concentrates and the Creole contributes a consignment of crude ore. In the report sent down from camp no mention is made of the Daly-Judge because it ships direct to the smelter without sampling at the Park. Without counting the latter, 6.180,780 pounds of crude ore and

During the present week the Daly will be heard from with its initial shipment from its new Mazeppa workings, and it will not be long till the Ontario begins production again, as the new mill is about ready to go into commis-sion. When the plant starts it is probyear for the Park opens auspiciously.

### CERRO DE PASCO MINES.

Why Frank Klepetko Will Not Build Smelters in Peru.

To those who have been keeping track of the operations of the big copper mining and smelting enterprise that has been launched at Cerro de Pasco, Peru, by A. W. McCune, J. B. Haggin and others, the following, which appears in the Butte Miner of Saturday as a special from Great Fall. Saturday as a special from Great Falls,

Various reasons have been assigned for the change of plans by reason of which Frank Klepetko has not taken personal charge of the development of and the construction of smelters there. When Mr. Klepetko expected to be engaged for several years, having full charge, he engaged a number of Great Falls men to go with him. Suddenly he announced that he was compelled to change his blank and is retired. plans and is not to go to Peru or place there the men whom he had engaged. His confidential explanations to those men were satisfactory, but none of the excuses made public seem plausible.

The Tribune now learns from reliable source that the change of plans was not made because of any deficiency in securing materials, or for any othe reason that has been publicly assigned. The facts are that A. W. McCune, a Utah millionaire, one of the principal owners of the Peru mines, has per-suaded J. B. Haggin, his co-owner, to let him take personal charge of the mines. Mr. McCune believes that he can develop the properties with native labor and such mechanics as may be picked up from passing vessels and in other odd ways, and he believes it will prove economical not to import highsalaried engineers, mechanics and la-

### MILLER MOUNTAIN MINE.

Nampa Company Has Opened a Fine Gold Property There. (Boise Statesman.)

ago by a screwariver. The corner was cut, the wound being very painful and rather serious, but Mr. Oglesby hopes it will not impair the vision.

The road to Miller mountain is open and in very fine condition, Mr. Oglesby came through in a cutter, making fast time. The remainder of the freight for the coverny is being forwarded from the company is being forwarded from Idaho City and will all be delivered in a short time. There was much trouble earlier in the season, as freighters were indisposed to undertake the work, but the roads have been good.

the roads have been good.

The heavy machinery for the plant is all on the ground and the buildings are nearly completed. Everything is under cover and the work will be finished up very soon. Mr. Oglesby expects to have the mill in running order in thirty days. It will be set up complete long before that, but it will require some time to get everything adjusted for permanent work.

The King Consolidated.

Justed for permanent work.

The electric plant is in operation and the works ar elighted entirely by electricity. The plant is run by the water power developed from the mill.

No work has been done on the mine since last fall as the ore opened up is

as this shall have been completed mining operations will be resumed.

It is expected the mill will handle It is expected the mill will handle about twenty tons of ore daily. The experimental works showed that 83 per cent of the value could be saved on the plates, and it was determined to pile up the concentrates until the best method of treating them could be determined.

termined.

The vein matter is very soft and mining operations can be conducted with small expense. Part of the gangue of the ore is quartz and part altered granite. The pay is confined to two streaks ranging about four feet wide each, there being a streak of andesite between them some four-teen inches thick. Sometimes the ore is all on one side of the andesite, but generally there is pay on both sides. In places the streaks are much wider than four feet. The walls are not well than four feet. The walls are not well is usual, the winter's run accur defined. At one point a cross-cut thirty feet long was made without disclosing walls. It was in altered granite all the way and showed some values as far as the work was driven.

### NEWHOUSE ENTERPRISE.

What the Great Bore Is Doing For Idaho Springs, Colo.

In speaking of the numerous great tunnel enterprises in the mining camps of Colorado, the Denver Mining Reporter has the following to say concerning the Newhouse enterprise at Superintendent Sherman of the Daly-Idaho Springs:
"The Newhouse tunnel at Idaho

shaft on the Gem Consolidated and a cross-cut connecting with this great tunnel gives a working depth-of nearly much would be sayed the company 2,000 feet on this property. The trans-portation of the ore to the mouth of the tunnel by electric haulage reduces the cost to a minimum. It is not diffi-cult to see that other properties ad-jacent to this tunnel may in the future utilize it to similar advantage. Other tunnel enterprises in Clear Creek county, while only practically beginning, are destined to be of large value in developing the mines and in working their ore products accessible to the railroads and mills."

more have been found by men who are known as "prospectors," men who form a distinct class in the great army of miners. The prospector is seldom satisfied to work for wages, preferring to take his chances in the unequal bat-tle with nature. His calling is distirctly an art—a science. A man may be a scholar and student of many sciences, but unless he has had the training "in the field," as a prospector he is likely to prove a dismal failure. The prospector is usually optimistic, as he must needs be, for his disappointments Ore shipments from Park City during the past week show a substantial outnumber the realizations of his increase. The Keith-Kearns company

among the rocky hills, in a wilderness The real prospector, however, lives in the future. If disappointed today he lies down in his blankets at night hoping for and expecting success tomorrow. His eye scans every rock, every mineral stain. He is on the lookout constantly for "indications." These include everything that his long study of his art has taught him to regard as a favorable possibility.

A prospector panning gravel in a

new gulch was asked "Any gold?"
"No," was the cheery reply, "but plenty of iron rock and rubies."

the gold accompanied other minerals of high specific gravity. The prospector did not reason it out along this line, but his experience had taught him able that some crude ore will be mar-keted, as well as concentrates. The tion "iron rock and rubies" (garnets) were also always present.

By many experiences of this sort he earns his craft, and he is not to be turned easily aside in his belief, for he has the "courage of his convictions" and is willing to follow them to disas-ter if may be, figurativly speaking, for nothing but absolute failure will convince him he was wrong, and even then he has a "notion" to try it again. In his quest he finds a piece of float. He will systematically trace it to its source if the richness of the rock warrants it. He will dig test pits by the dozen, and some hillsides have been "coyoted" into a labyrinth of passages in the search for a rich vein the float in the search for a rich vein, the float of which has been discovered below on the hillside. Too often his knowlthe copper mines at Cerro de Pasco, edge of geology is limited to the field Peru, and the construction of great of his own experience and he misinterprets what he sees, but on the practical side he is all right, and will follow his "indications" unerringly to a conclusion of some sort. If the find proves too small or too low grade or is in any way unsuited to his fancy he moves to another place, pursuing his calling untiringly and often success-

> The mining industry owes much to the prospector, and he has been a factor in the development of the great west, which few who do not know him, and who are unfamiliar with what he has done for the world, can realize.

### PARK CITY MINING.

The Record. Articles of incorporation have been

filed for the Cougar Gold & Silver Mining company, organized in this city, the capital stock of the corpora-tion being \$50,000, divided into 200,000 shares of the face value of 25 cents per share. The company's holdings are on the Smith & Morehouse fork of the Weber river, some twenty-two miles east of Park City. The claims were located years ago by A. F. Martin, and though a great deal of work has not been done on the ground some fine looking rock carrying well in gold and silver has been found. It is the M. L. Oglesby, superintendent of the Nampa Mining company's property at Miller mountain, is in the city. He is on his way to Salt Lake for treatment for an eye that was injured some days ago by a screwdriver. The corner was go by a screwdriver. The corner was contributed by the wound being year painful and company are: R. W. McDonald, presented the wound being year painful and company are: R. W. McDonald, presented the company are: R. W. McDonald, pre work may be steadily and systemati-cally prosecuted. The officers of the company are; R. W. McDonald, pres-ident; G. F. Martin, vice president, and A. M. Martin, secretary and treasurer, all local men. The property will surely be heard from when work is com menced.

### American Flag.

The contact at the American Flag was reached Wednesday evening and drifting will begin in the near future. In view of the splendid showing already made in this property, good news

## The King Consolidated.

At this property work continues with the customary care and thoroughness for which its superintendent is so well known. The new sinking pump is in No work has been done on the mine since last fall, as the ore opened up is sufficient to keep the mill running a long time. All the men have been kept busy on the outside work, but so soon be cut and a new pump installed. The mation see advertising matter or agent.

pump, a duplex 14x8x15 Smith-Vaile, arrived last week and is now at the mine awaiting the cutting of the station. There is a great deal of water ly informed a Record reporter yesterday that it was being well taken care of and that no further trouble on this

score was anticipated.

of ore will be run through, but until then the mill will remain closed. ring the spring months the water becomes so troublesome in the mine that it is impossible to carry on work and then the mill is run to its full capacity. In the mine the working force is now engaged in drifting from the shaft to the vein. When this goal will be reached is a matter of mere conjecture. Everything is looking very en-

during the past year. Superintendent Sherman of the Daly-"The Newhouse tunnel at Idaho Springs, while not yet completed, has advanced over 10,000 feet from the point of beginning, and is now becomes of beginning, and is now becoming a factor in the mining and sending out of ore on Seaton mountain. The recent connection made between the deep and their services were no longer needof cutting down expenses, but was done because they had finished their work much would be saved the company

each month by this action, Mr. Sher-

"That is not the question; the men were not let out because we wanted to cut down expenses, but because they were through with their work. will be twenty-five or more men laid off at the Daly-West in a couple of weeks or so, but it will not be in order that expenses may be reduced but be cause their work will have been con oleted. It takes just so many men to run a mill-no more, no less. We always keep one carpenter at each mill and that is what we are doing now at the Daly-Judge. The extra carpenters now employed at the Daly-West are doing extra work. This newspaper talk of our cutting down expenses and the rumors regarding the closing down of the Daly-Judge mill are all non-

The Daly-Judge mill is running in splendid shape at present. On Thursday last 469 carloads of 409 tons of ore were run through, Certainly a splendid showing, and some idea of what the mill is doing may be determined from the fact that at this rate the Daly-Judge mill would run through more ore in four days than the Daly-West was running in one month when Mr. Sherman took charge. With such a record as this there can be no just complaint made about the mill's work.

#### ANNIE LAURIE EXTENSION. Formation In Tunnel Changing and

First Vein is Being Approached.

Richfield, Jan. 2.—Barney Middlemiss, who is superintending work at the An-nie Laurie Extension driving a long tunnel, is in Richfield this week spend-ing the holidays. He says the formation has changed and quartz has been encountered in the tunnel. This is taken to indicate the proximity of a vein in the region where it yas expected. The tunnel is now in about 370 feet, and those familiar with the ground are of the opinion that the first Annie Lau-rie vein will be struck within the next sixty feet. The management expects to plenty of iron rock and rubles."

This to him was an indication of the probability of finding gold in that gulch and perhaps in the next panful of dirt. The reason for this was that onsolidating with the Blue Eagle Min-

ing company or combining the two properties and forming a new company. Peter Gottfredson went to Marysvale uesday to continue Franklin company. J. M. Jones, who is interested in the nineral paint mines near Koosharem, has arrived here from Kansas City. He will go out to the property and put some men to work. The company has fixed up the mill at Glenwood, and he will oversee the starting of the mill be-

fore returning to Kansas City. W. H. Robinson came down from Marysvale this week, after attending to some assessment work and looking after some work on the Log Cabin.
A. P. Rasmussen and G. N. Harmon of the Belknap property went to the mine Tuesday to look after some work that is going on at that property

Manager Hyde of the Annie Laurie ompany went to the mine from Salt Lake Monday. Thomas Gillan went to Marysvale Tuesday to continue work for the Franklin company.

### Mining Notes.

Idaho City World: R. A. Oglesby of Salt Lake arrived here last Monday and will leave in two or three days for the Magnolia mine, to remain all win-ter. He is a son of the president of the Magnolia company.

Boise Statesman: David Kennedy is in from the Lincoln mine. He reports the mill is running regularly and turning out some twelve tons of con-centrates daily. Sixty horses are on the road hauling the concentrates, but the teams cannot keep up with the

Nevada Mining Review: It is earned that attachments and liens aggregating in the neighborhood of \$9,000 have been filed against the property of the Tybo Mining & Reduction com-pany, operating at Tybo, Nye county and operations have been suspended

at that place. De Lamar Lode: A number of pros pectors are working about twenty miles above the junction of the Virgin Muddy, on the Virgin river. Just what will amount to remains to be seen, but there are many good surface indications and considerable ground has been located.

Twenty-one American prospectors under contract to the Northwestern Siberian company and the Guggenheim Exploration company to search for gold and other minerals in northeastern Siberia, have returned to America. They are practically all agreed that the country is rich in minerals, and state that good colors were found in

nearly every creek prospected.

Eureka (Nev.) Sentinel: Frank
Quinn and Charles Allen of Eureka
recently shipped to the Selby Smelting company sixty odd tons of ore taken from the Oneonton mine at a depth of about 150 feet. This mine is located in Mill canyon, about ten miles northeast of Cortez, in Eureka county, and is one of the John Irwin group of six mines, which are owned by Duncan Falconer and Frank Quinn. Mr. Allen some time ago leased the Falconer in-terests, and he and Mr. Quinn are working the property. They already have quite a body of ore carrying silver, lead and a little gold, and there is every indication of the Oneonton developing into a big paying proposition.

NOTICE IS HEREBY GIVEN THAT
on the 12th day of January. 1294, at 11
of clock a.m., at the ward house in Taylorsville, a meeting of the stockholders
of the North Jordan Irrigation company
will be held for the purpose of considering the following amendments to the articles of association, to-wit:
Article III. Amended to read as follows:
The object and pursuit of business shall
to the widening, extending and maintaining of the North Jordan canal, located
in North Jordan irrigation district, Salt
Lake county, and to convey, through
said canal, that portion of the water of
fliver Jordan owned by the subscribers
hereto, and hereby transferred and conveyed to this association, also to purchase and appropriate and in any and
every manner acquire additional water
through any and every source, to be distributed by the said company, hereby legalizing all previous purchases and appropriation by the directors of said comband, and said water to be disposed of.
soid, distributed and used annually under the direction and supervision of the
trustees of this association, for irrigating
and cullnary or other purposes and to
this end the said association and supervision of the
trustees of this association, for irrigating
and cullnary or other purposes and to
this end the said association and the interest of
the association, to facilitate, control, regulate and distribute said water within
said North Jordan irrigation district as
it now exists or hereafter may be altered.

Article V. Amended to read as follows:
The capital stock of this association
shall be \$150.000. divided into 6.000 shares

it now exists or hereafter may be artered.

Article V. Amended to read as follows: The capital stock of this association shall be \$150,000, divided into 6,000 shares of \$25 each, the additional two thousand shares provided for by this amendment to be placed in the treasury to be disposed of by the board of directors to present stockholders or such other persons thereby created stockholders as the board of directors may determine.

This stockholders meeting is called by the board of directors at a session held Dec. 4, 1903.

Secretary.

Assessment No. 3.

NEW YORK BONANZA MINING
company, a corporation. Principal place
of business, Salt Lake City, Utah.
